^a The base year is the year before the first year of the stated period, and percentages for the plan data are based on the midpoint of the ranges, where given.

^b The official Soviet measure is based on a Marxist concept of national income and differs significantly from the concept used in Western market economies. For example, the Soviet measure excludes the value of services and overstates the contribution of industry by including all indirect taxes.

^c Official "gross" value series.

^d Including production of gas from coal and shale. Table 88, p. 84, excludes production of gas from these sources.
